CTU500 INTRODUCTION TO ISLAMIC ASTRONOMY

This course aims to introduce students to the astronomical aspects of ibadah. Thus, the determination of prayer times, the determination of kiblah and taqvim and determination of Islamic new moon will be discussed. For a better understanding of the phenomenon, the basic foundation of key concepts in astronomy will be explained.

CTU501 HALAL FOOD PRACTICES

This course aims to introduce to the students to the concept of halal and haram food and its requirements according to the Islamic perspective, and requirements set by the Halal Certification Authority. These cover the components involved in halal food supply chain starting from raw materials to the distribution of halal food to the end consumers. Relevant current issues relating to the application of modern food technologies advancements (in terms of the raw materials, processing aids and new processing technologies etc.) in the halal food production will also be discussed.

IPK661 ENVIRONMENTAL ETHICS

This course focuses on environmental management ethics with direct comparison to Islamic ethics (al adab) and its relationship to the environment. It includes three major theories namely anthropo-centrism, eco-centrism and techno-centrism with special discussion from the Islamic perspective. The current applied management will be linked into philosophy of creation, its function, roles and rights of human being up to the current environmental crisis with their solutions will be discussed along with the Islamic points of views; globally and locally.
